Timisoara, Romania \cdot and reisurugiu.tm@gmail.com \cdot +40774041350 \cdot and reisurugiu.com

BACHELOR

Polytehnic University of Timisoara **BS** Computer Science

Work Experience

Atos

DevOps Engineer

Timisoara. RO Sep 2018 - Jun 2022

Aug 2020 - Oct 2022

Oct 2022 - Present

- Administration of linux servers (updating, maintenance, backups) using ansible
- Deployed and managed kubernetes clusters on premises (Rancher) and in the cloud (AKS) via terraform
- Created and managed a Github Organization and was responsible for setting up pipelines using Github Actions (security scanning, automated deployment etc.)
- Managed Microsoft Sentinel via terraform: created analytic rules, developed custom queries, automated response to incidents using function apps

e-spres-oh

DevOps Engineer

- Teaching developers how to do DevOps & Security.
- Bringing existing resources under Terraform's management. Managing AWS and running our apps on EKS.
- Setting up GitHub properly (environments, permissions, pipelines, scanning)
- Writing security integrations in Go

Skills

| Programming languages: | Go, Python, Bash, Typescript |
|------------------------|--|
| Tools: | Terraform, Ansible, Kubernetes (+ArgoCD), Github |
| Soft skills: | Project lead, Listening, Googling stuff |
| Platforms: | AWS, Azure, Linux, Kubernetes |
| | |

Projects

Rancher migration to AKS Kubernetes, Rancher, AKS

Coordinated a migration for an on-prem cluster from Rancher to AKS (Azure Kubernetes Service) using Terraform. The company wasn't happy with the management cost of running on-premise, so moving to cloud-native services in Azure reduced the maintenance cost by 50%.

Internal platfom Go, Terraform, Github actions, Trivy, Tfsec

Created an in-house web platform that enabled our developers to generate basic resources that were compiled to Terraform, scanned, and versioned, and then deployed. This helped our developers deploy their apps 2 times faster, with a nicer DX.

Smart city Sentinel, Terraform, Github Actions

Delivered the monitoring stack for a smart city, which consists of Microsoft Sentinel. We ensured that everything was sending logs, alerts were set up, and metrics were coming in, and the response to common incidents was automated using Function Apps. This increased their security score to above 85%.

Bank data synchornization Python, Bash, Docker

Devised a solution to synchronize thousands of machines across Austrian bank branches with limited bandwidth due to DSL reliance. The solution employed Ansible, Bash, and Go, synchronizing files during bandwidth-throttled periods. Over 1,000 machines were involved.

Enfineo AWS, EKS, Terraform, Github Actions

https://enfineo.com/ Working on Enfineo, a fintech app like Revolut, I manage our AWS environments (mainnet & testnet, crypto) using Terraform, promote devops mindset, oversee GitHub organization, and implement AWS security solutions. I've also reduced costs by tagging resources, introducing AWS Spot Instances, and cutting EKS costs by 40%.

Diploma project Go, React, SQLite

https://github.com/DeluxeOwl/kala-goA framework for authorization written in Go and React, based on 'Zanzibar: Google's Consistent, Global Authorization System.' Kala allows you to model any type of permission (RBAC, ABAC, ReBAC, ACLs, etc.) as a graph, and to integrate with your own applications using a custom DSL built on YAML.
